Get the app here: (or download directly from us here: [The Game: DECADE KAMEN RIDER](#) is an arcade style kamen rider simulator game, where you can ride 9 different kamen riders and become the Kamen Rider you want to be! In this game you control the Kamen Rider (armed with a shinken, a device that lets the rider punch holes into his enemies and his Shinken is your main weapon!), you also can choose one of 9 different kamen riders! This game has an awesome 3D touch interaction, the screen reacts to your touch and lets you know where you touched. There are 9 different kamen riders with different special moves, each has his own special transformation item called Gashoken. When your Kamen Rider use this item, he gets a special state called Gashoken Mode. This mode lets him attack in a certain way or be immune to attacks. Post Your Comment Didn't you like this post? posts are made!The effect of newly designed chlorhexidine-containing composites on microleakage of Class V composite restorations. It is not known whether the use of chlorhexidine-containing composite affects the microleakage of Class V restorations. The purpose of this in vitro study was to evaluate the microleakage of Class V restorations restored with or without chlorhexidine in a newly developed composite. Sixty bovine teeth were used, and 60 Class V cavities were prepared and restored using: 1) Scotchbond Multipurpose; 2) Scotchbond Multipurpose with chlorhexidine; 3) Scotchbond 2; and 4) Clearfil SE Bond. The teeth were immersed in 2% methylene blue for 24 hours, sectioned, and the microleakage scored. The Scotchbond Multipurpose adhesive group demonstrated the lowest leakage ($P = .0001$), the same as the Clearfil SE Bond group. The chlorhexidine group did not differ significantly from the control group ($P = .7075$).EcoTect
